## 2: How to installed the CorelDRAW Plugin

Step1: Before installed the Plugin, make sure CorelDRAW software is close.

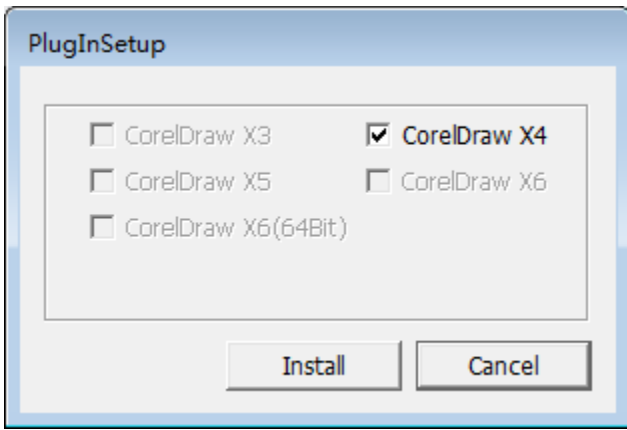

Step2:open SD card file

 CorelDrawPlugin	2016/3/31 10:26	文件夹
 Drv32	2016/3/31 10:26	文件夹
 Drv64	2016/3/31 10:26	文件夹
 User manual	2016/3/31 11:49	文件夹

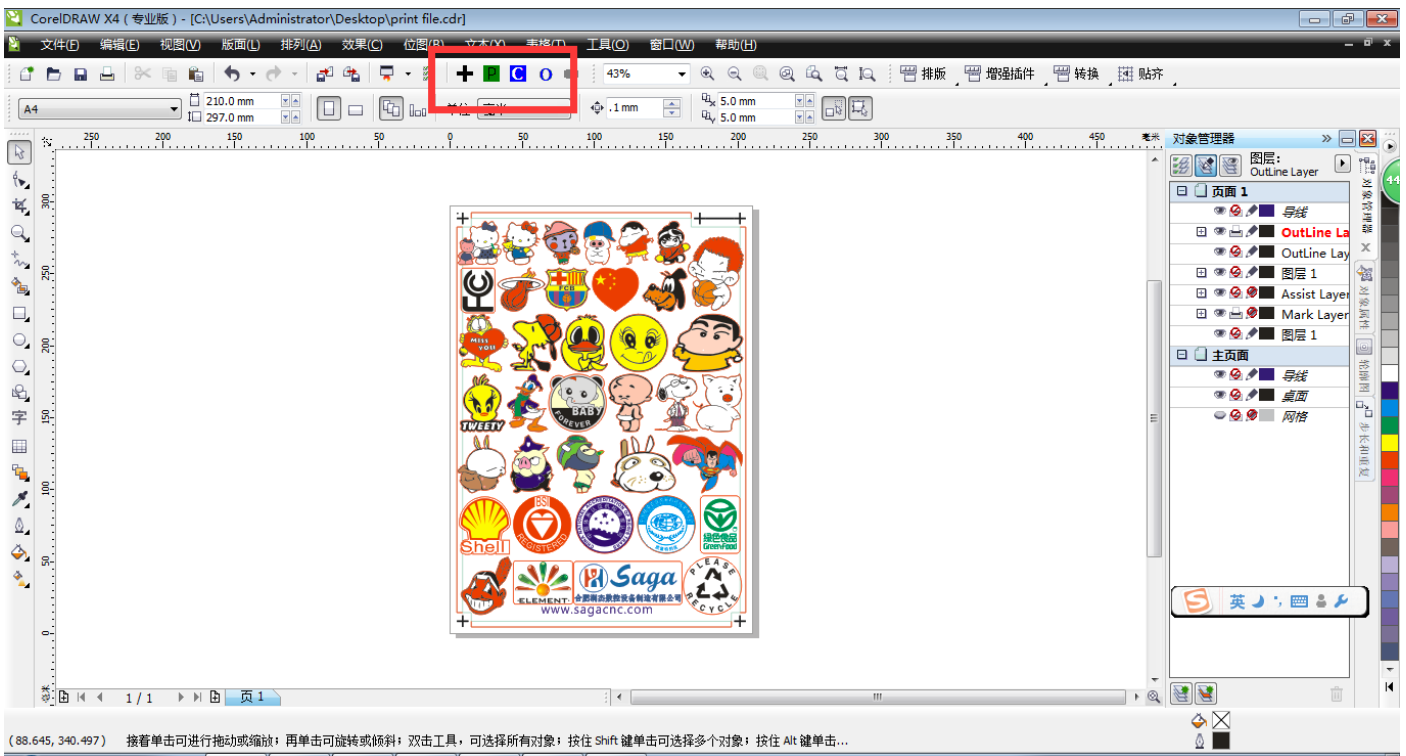

Step3: click CorelDraw Plugin

Step4: Click PlugInSetup , the system will automatically detect which version corelDRAW computer has, and then click Install.

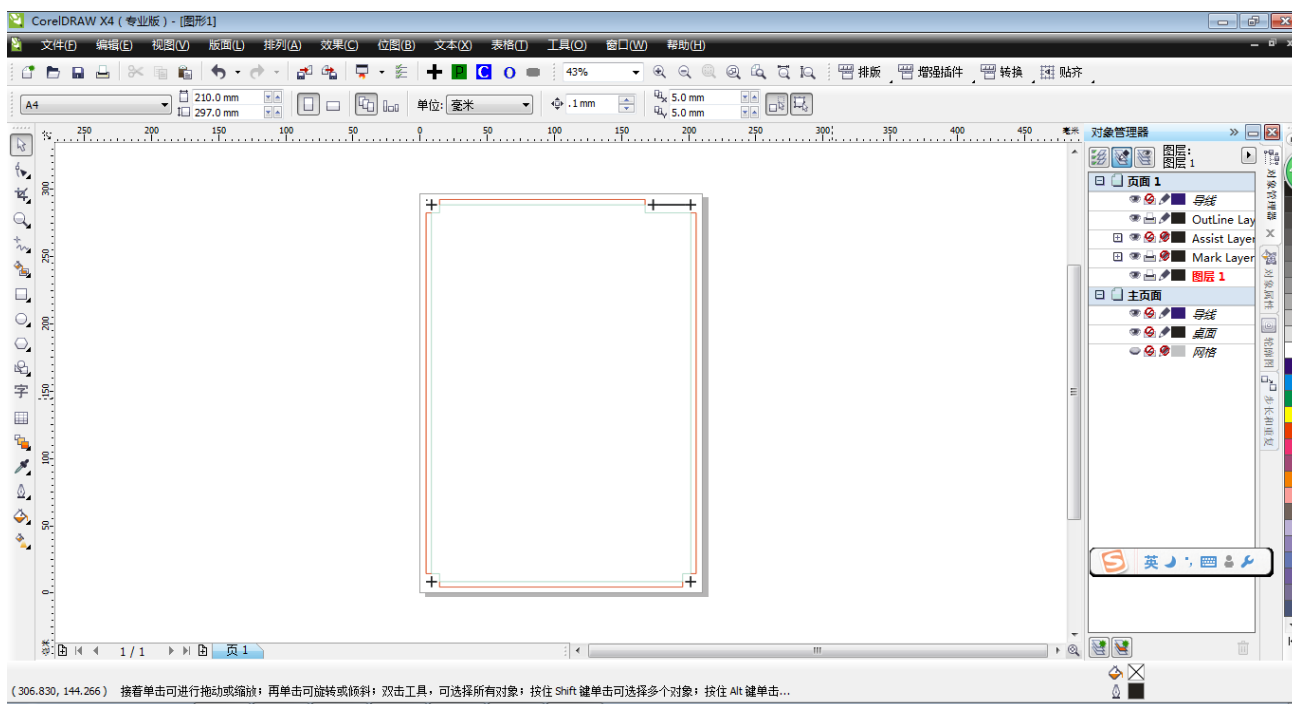

Step5: After installation, open corelDRAW software, the software which will appear four icons (below) which proved successful installation of the plug-corelDRAW

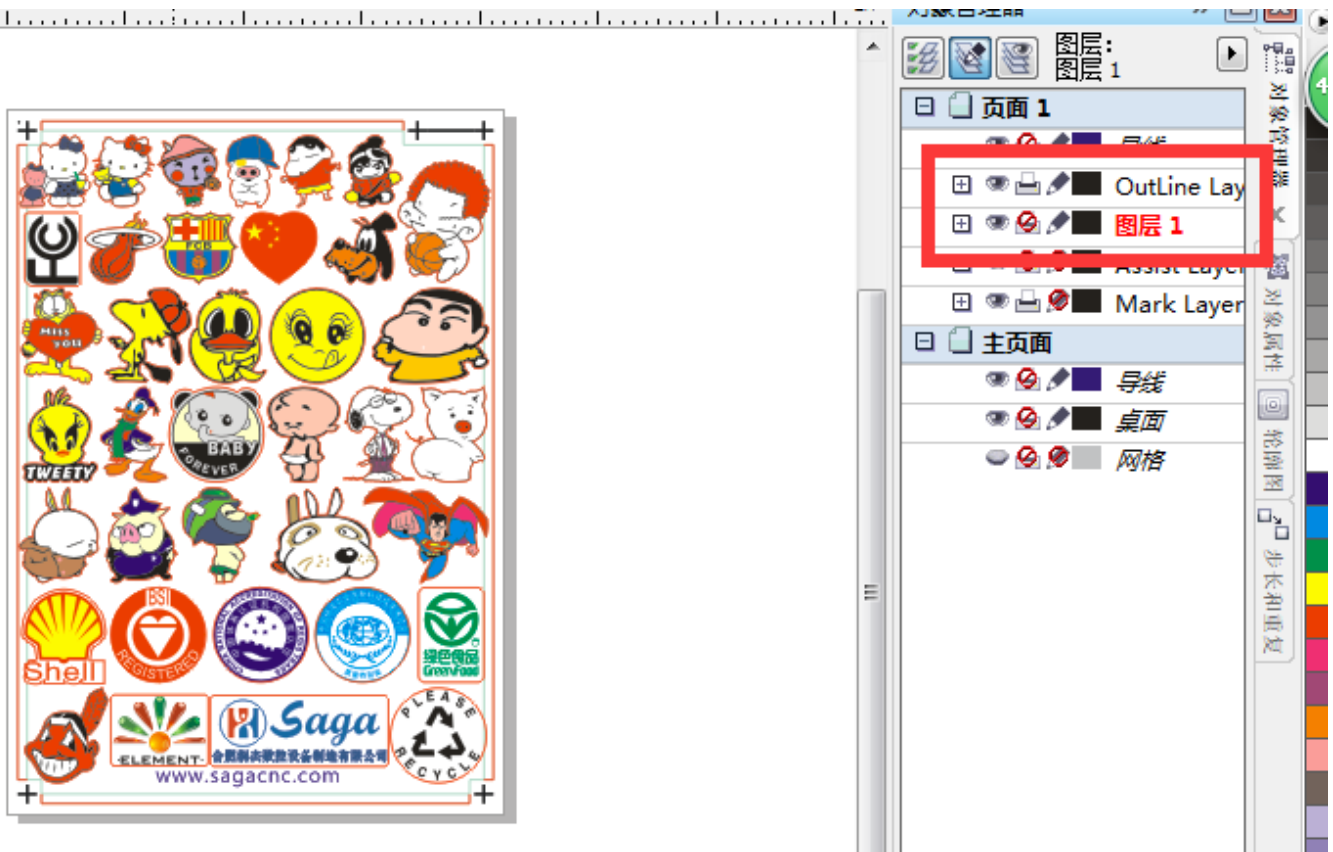

PS: the meaning of these four icons

**+**: Representative adds marker-- When selecting the size of a good page, click on the icon, the system will automatically add the marker may be used as well as the page range (preferably within a document produced green frame over the green frame to be but can not exceed the red frame)

(In the process of the production of documents, labels and cutting the outline should be divided into two layers, layer a label on the inside, cut in the outline on the Outline Layer)

**P:** After doing the above two layers, click on the icon, and then print directly or save the file. This file is the file to print.

**O:** After saving the file to print, click on the icon, the system will automatically adjust the cutting contour attributes. (Including cutting sorting and cutting width size) it is very important to save a file cutting step

**C:** Adjusted good cutting contour, click the icon, and then click Print, select Save to File sheet cutter- - forum to the upper left corner - saved as .plt format. (Then save the file plt file is cut

directly into the SD card just fine)
